

fieldNotes

Last week we started with the surveying activities at the Statue of Liberty. It was an exciting week!

I want to share our experiences with all of you and let you know of the progress of this great project. Feel free to approach me with questions.

I'd be more than happy to exchange information with you!

A handwritten signature in black ink, appearing to read "Jim".

Day 1

We have moved passed level 3P and we aren't going to stop until we get to the top of the Pedestal (6P). At the moment we are capturing scans of the Eiffel Beams which form the structural support for Lady Liberty.

I was told the bolts were tightened with an impact wrench in 1885. Simply Amazing!

Day 2

But we are capturing amazing data. Gotta go a few more scans to get before we have to catch the boat back to Ellis Island.

An awesome two days of work! Feeling exhilarated as I reflect on the past two nights and can't wait to start pulling all this information together. I am going to relax now and take in the views as we sail back to Ellis Island.

I hope you have enjoyed these notes from the field. I will keep you updated on our progress.

-Jim
